Now you can **correctly** dispose of Pharmaceutical and RCRA waste.

By law and for a better environment, healthcare facilities across the USA must separate hazardous and non-hazardous pharmaceutical waste.

Unfortunately, however, it can often be extremely difficult to determine which is which. This can lead to healthcare staff ignoring the correct waste segregation rules, resulting in an environmentally damaging waste destruction outcome.

But not any more. Daniels has an easier way.

Did you know?

The Environmental Protection Agency (EPA) is constantly investigating breaches of the Resource Conservation and Recovery Act (RCRA) governing the disposal of hazardous waste. Infringements can result in corporate fines of up to \$37,500 for each violation per day, as well as personal fines and/or imprisonment for any and all involved employees up to the CEO.

The Daniels Pharmaceutical Waste Segregation Service

Pharmaceutical waste experts

Powerful segregation software

Environmentally responsible disposal

Making waste segregation **easy** and compliant

Daniels' waste segregation experts can equip your healthcare organization with the knowledge and systems that will ensure that your pharmaceutical waste is segregated and disposed of correctly and efficiently.

We work with you to review, analyze and streamline your pharmaceutical waste stream, and provide (and train) you with a powerful, yet simple to use, waste classification software system.

We'll also help you to determine your hazardous (RCRA) and non-hazardous (Pharma) waste container requirements, and the most efficient system of pick-up and disposal. This cost-effective, customized service will take the guesswork and compliance risk out of your pharmaceutical waste segregation.

Pharmaceutical waste segregation database

Our web-based, 'Waste-ID' database utilizes a database of over 305,000 NDC products, and is regularly updated to incorporate regulatory changes. Just enter the drug name and the system displays the correct disposal method. We'll install the program, train your team and provide support. Segregating pharmaceutical waste couldn't be easier.

Better for the environment

Correct waste segregation reduces environmental damage, because hazardous and non-hazardous waste must be destroyed according to strict environmental regulatory requirements. Mixing waste reduces the environmental effectiveness of the destruction process.

Specialized RCRA waste treatment and handling

RCRA waste requires specialized containment to ensure correct disposal. The Daniels team will work with you to determine the required quantity and sizes of containers within your organization, and will provide advice on the most effective collection and transport options.

The secure solution for Pharma waste

The reusable, environmentally-friendly Pharmasmart container has been specifically designed to minimize the risk of theft or unauthorized removal of expired or waste pharmaceuticals. The Daniels Safety Tray prevents hand access while the container is in use, and when it's full, tamper-proof locks are engaged.

Reliable, dedicated transportation

Daniels provides the highest standards of safety and service. We comply with strict government regulations to ensure that your waste is transported and destroyed in a safe and environmentally responsible manner.

Cost-effective

The Daniels pharmaceutical waste service maximizes the efficiency of your waste stream and reduces your administrative burden by providing one point of contact and less paperwork.

To reduce the risk of illegal pharmaceutical waste segregation in your organization, please contact your local Daniels representative or contact us on:
